Making Earth a Better Place

ABOUT US

Enviro Works is an emerging environmental engineering company providing a host of environmental services and solutions. It was started in October 2021 and today has grown to have a team of six engineers and access to a host of experienced consultants with rich expertise in diverse fields. The company is driven by collective conscience to solve environmental problems and to provide environment – friendly services.

VISION

To be a sought-after, customer-centric, and environmentally conscious company that helps Earth become a better place

MISSION

To provide superior technical consultancy, simple and cost-effective solutions, and services to environmental problems.

PHOTOS OF OUR PROJECTS

OUR SERVICES

We offer the following three types of services :

1. Procure approvals or clearances from TNPCB and other statutory bodies.
2. Provide Technical Consultancy for Environmental projects.
3. Undertake Turnkey Environmental Projects.

Environmental Clearance : For building projects with more than 20,000 sq.m. area, we do the Environmental Impact Assessment and get approval from State Environmental Impact Assessment Authority.

Pollution Control Board Certification : We also assist in getting clearance from State Pollution Control Board.

Coastal Regulation Zone Approval : We will help you comply with all CRZ regulations and procure approval for your buildings.

Sewage Treatment Plant : The sewage from apartment, offices, and factories can be treated and reused for non-potable uses as per the stringent norms of State Pollution Control Boards. We use the most advanced technology which makes water odour, colour and turbidity free suitable for flushing.

Effluent Treatment Plant : Effluents from industries can be treated into environment-friendly discharges complying to norms of Pollution Control Board. We have the special skills and expertise required for this.

Water Treatment Plant : Water treatment involves the removal of unwanted materials by physical processes and modification of chemical properties. We deal with a range of WTP like Reverse Osmosis, Softener, Demineralisation Plant, Ultra filtration etc. as per the output parameter required by the client.

Organic Waste Disposal : We design composters to convert organic waste into fertilizers, which can be directly used on plantations.

Air Pollution Control : Gaseous emissions can be detoxified using scrubbers, dust collectors and separators. The air that is let into atmosphere will meet the quality standards.

TURNKEY SOLUTIONS

For all the above, we can design, supply, install, operate, and maintain such plants to the exacting standards of government regulations.
